

## On the path to success with a virtual tutor: **The Soon-Trainer**

Case-based learning reflects the challenges of daily practice. Active training in a realistic context motivates participants and ingrains knowledge and experience. Learners participate in case-based scenarios, train their decision-making skills, and expand their base of practical knowledge.

As they progress independently through concrete scenarios, learners benefit from the guidance and support of the training system. A virtual tutor guides participants through the case study; the amount of assistance they receive depends on their previous experience and skills. The tutor provides individual feedback on their answers to specific questions and discusses possible decisions. In the end, the participants receive an assessment of their progress and their decisions. Throughout the entire process, the system presents solutions to problems and specifically targets decision-making skills.

The Soon-Trainer places participants on the path to new, hands-on forms of learning.

### Contact & Information

Soon-Systems GmbH  
Syrlnstr. 5  
D-89073 Ulm

Fon: +49 731 280 6569-0  
Fax: +49 731 280 6569-9

### Areas of application

Thanks to its many possible applications, the Soon-Trainer is used in vocational training and continuing professional education organizations, institutions of higher learning, and corporate HR development programs. Currently the learning system is used by physicians, nurses, social scientists, architects, and many others. Over many years, the ongoing development of the system has profited from the valuable feedback of many different professional groups.

### Technology

The Soon-Trainer is user-friendly and operates via your web browser. A SCORM interface allows the system to be easily integrated into a learning platform. We would be happy to adapt the design and functionality of the Soon-Trainer to your requirements and structures as needed.
